

Product Overview & Features

AI-enabled meeting collaboration gateway

Share the screen. Make the discussion visible.

The iDma GW-400 (Gateway Pro) adds wireless presentation, live annotation and a shared whiteboard to an existing room display. Presenters keep control of their computers while colleagues contribute from compatible phones, tablets or optional iDma AI Boards.^[1, 2, 3]

Core collaboration works on the room network. Optional cloud services add live transcription, bilingual text captions and illustrated AI meeting minutes.^[2, 4, 5]

KEY FEATURES

01 Join without a participant app

Present from a compatible browser or supported native casting. Guests scan the room QR code and enter the PIN to participate, avoiding a separate software rollout to each device.^[2, 3]

03 Bring real paper into the meeting

Use compatible PP-100, PP-110 or PP-120 AI Boards to add natural handwriting to the presentation or whiteboard. Up to two Bluetooth boards are supported; boards are sold separately.^[1, 3]

05 Follow two languages on screen

Optional cloud transcription and bilingual captions display speech as text, with translation when enabled. Attendees can follow captions on a room display or a personal browser page.^[4]

02 Annotate without taking over

View, zoom and mark the shared content from a phone or tablet. Managed annotation seats let reviewers contribute while the presenter continues navigating the original material.^[3]

04 Keep the working pages

Move from presentation markup to a full-screen whiteboard for diagrams, calculations and ideas. Save annotated pages and export a multipage PDF for later reference.^[2, 3, 7]

06 Retain more than a transcript

Optional AI visual minutes combine enabled speech, shared-screen context and handwriting into an illustrated meeting record, helping teams review what was discussed and what it referred to.^[5]

Local collaboration is included. Cloud AI and language services are optional and billed separately. See service scope on page 3.

From arrival to follow-up

A connected workflow for presenting, contributing and keeping the results.

BEFORE	DURING	AFTER
Open & share	Write & discuss	Review & reuse
Connect the display and room network. Share from a compatible browser or casting method.	Scan to join, follow the content and request annotation. Add paper input with an optional AI Board.	Save annotated pages. With cloud AI enabled, generate visual minutes for review and follow-up.

CAPABILITIES THAT MATTER IN THE ROOM

FUNCTION	GW-400 / GATEWAY PRO
Presentation & participation	Browser-based sharing, including WebRTC visuals, and supported native casting. Windows, macOS, iOS and Android use compatible sharing or browser-participation paths. [1, 2, 3]
Dual-display capability	4K dual-display support with HDMI and DisplayPort connectivity. Supported resolution and refresh combinations depend on the connected displays and configuration. [1]
Mobile collaboration	Up to 8 Pad participants online, with up to 2 simultaneous annotation seats. “Pad” means the compatible phone/tablet browser experience, not an included tablet. [1, 3]
Real-paper input	Up to 2 compatible Bluetooth iDma AI Boards. PP-100, PP-110 and PP-120 support pen-on-paper participation and are optional accessories. [1, 3]
Whiteboard & records	Full-screen shared whiteboard, presentation annotation and saved annotated pages with multipage PDF export. [2, 3, 7]
Local network operation	Sharing, whiteboarding and annotation can operate on the local room network without internet access. Cloud services require internet connectivity. [2, 5]
Live language (optional)	Real-time transcription and bilingual text captions. Base languages: Chinese, English, Cantonese, Japanese and Korean. Other languages and usage follow the selected service configuration. [4]
Visual minutes (optional)	AI-generated meeting records can combine enabled speech, screen content and handwriting. Output depends on available inputs and should be reviewed before business use. [5]

INCLUDED WITH THE GATEWAY

Long-term Gateway Standard software usage rights for local collaboration. The one-year term refers to the hardware warranty, not an annual Standard software subscription.^[2]

OPTIONAL CLOUD SERVICES

Live transcription, bilingual captions and AI visual minutes require an activated AI service. Pay-as-you-go and room plans are separate from the hardware purchase.^[2, 4]

Compatibility note: browser participation and full-device mirroring are different functions. Screen capture, audio sharing and permissions depend on the source device, browser and selected connection method.

Package, warranty & service scope

The essentials for a complete product listing.

PRODUCT IDENTIFICATION

Brand / supplier

iDma / iDma International Ltd.

Product model

GW-400

Commercial designation

Gateway Pro

MFR# in supplied sheet

GW-400(PRO) [1]

Source product name

Edge Gateway (AI Agent Embedded) [1]

IN THE BOX

iDma GW-400 Gateway

Power adapter

HDMI cable

Included accessories follow the supplied GW-400 product sheet.^[1]

AI Boards, phones/tablets and room displays are not included. Cloud AI services are separate. A DisplayPort cable is not listed as an included accessory.

One-year limited warranty

iDma provides a one-year limited hardware warranty from the date of purchase. A unit that develops a defect within the first year will be replaced at no charge under the limited warranty. After the first year, paid repair service or a trade-in credit toward a new unit is available.^[1]

Service scope & setup requirements

Use a compatible room display, network and participant devices. A suitable audio input is needed for speech-based cloud services. Gateway Pro is the hardware edition; AI Pro is a separate cloud service plan. Embedded AI-agent integration does not mean unlimited cloud AI is included or that cloud AI runs offline.^[1, 2, 5]

Bilingual captions are on-screen text, not synthesized spoken interpretation. AI voice interpretation is not included as a generally available production feature. Zoom/Tencent dual-screen bridging is assigned to Gateway Max on the current website and is not specified for this Pro brief.^[2, 4, 6]

BEFORE PUBLICATION: CONFIRM THE EXACT MFR#

The supplied sheet states GW-400(PRO); the B&H inquiry uses GW-400. The website's Gateway Pro detail page currently carries a GW-210 heading. Confirm the final orderable manufacturer part number before publication. This brief preserves the supplied value rather than resolving that naming difference by assumption. [1, 6]
